ABSTRACT OF THE DISCLOSURE

A cover for massaging member on an elastic chair has an elongated body made of soft material. The elongated body has an open side with two edges, two open ends, and a zipper mounted at the open side for fastening the edges of the open side. A chamber is defined in the elongated body and two openings are respectively defined at the open ends when the open side is zipped up. Multiple bulges are protruded from the body. Whereby, massaging members and wires can be concealed and cushioned by the cover and the elastic chair will have an attractive appearance and make a user sitting on the chair feel more comfortable.
